About me

As a Full-Stack Developer, my passion has been building robust, end-to-end web applications. Through this experience, I've come to understand that creating a great application isn't just about features; it's about making it secure. This realization has sparked a deep desire in me to shift my focus from just building systems to learning how to protect them. I am now aspiring to become a cybersecurity professional, eager to apply my developer's mindset to the world of ethical hacking and defense. I am constantly learning and am ready to collaborate on challenging projects that will allow me to help secure the very technologies I love to build.

Experience

CamCyber Digital Teach Team. Apr 2024 - June 2024

POS management system

- Developed and implemented a comprehensive inventory and sales management system under the guidance of a senior mentor.
- Engineered features to efficiently track product sales and stock levels, ensuring accurate inventory control.
- Designed the system to help optimize overall store operations for increased efficiency.
- Tech Stack: NestJS, AngularJS, PogosSQL

KPC UYFC. July 2024 - Nov 2024

UYFC membership management system

- Developed a full-stack web application to simplify membership management for staff and users across multiple branches.
- Implemented core features for tracking membership status, saving user information, and enabling fast data retrieval.
- Designed and integrated modules for digital task approvals and automated report generation to improve overall efficiency.
- Tech Stack: NestJS, AngularJS, PogosSQL

Polygram Solution Co., Ltd. Feb 2025 - Present

Full-Stack Developer

- Designed and developed full-stack web applications for clients, contributing to the entire project lifecycle from concept to deployment.
- Engineered scalable back-end services and RESTful APIs using Express.js and MongoDB.
- Built dynamic and responsive single-page applications for the front-end using AngularJS.
